

## Cyber Security Monitoring – Essential

The threat of cybercrime to businesses is rising fast. In fact, Cyber-attacks per week on corporate networks increased 50% in 2021 compared to 2020. In a world where cyber threats are evolving, you must prioritise cyber security. No matter how big or small your organisation is, businesses are being urged to strengthen their cyber security practices in a time of increasing cyber risk.

Data loss can disrupt your productivity, damage your reputation and expose confidential information which may result in a loss of customer loyalty and therefore a potential business failure.

### How does our Cyber Security service help protect your organisation?

Our Cyber Security solutions ensure your business is protected from potential threats by proactively identifying, evaluating and reporting on security risks in your systems and software. By combining different services into a comprehensive package, we safeguard your organisation's systems, data and people from cyber threats through the following three key areas and provide a high level of protection for your business.

Our Cyber Security Monitoring service explained:

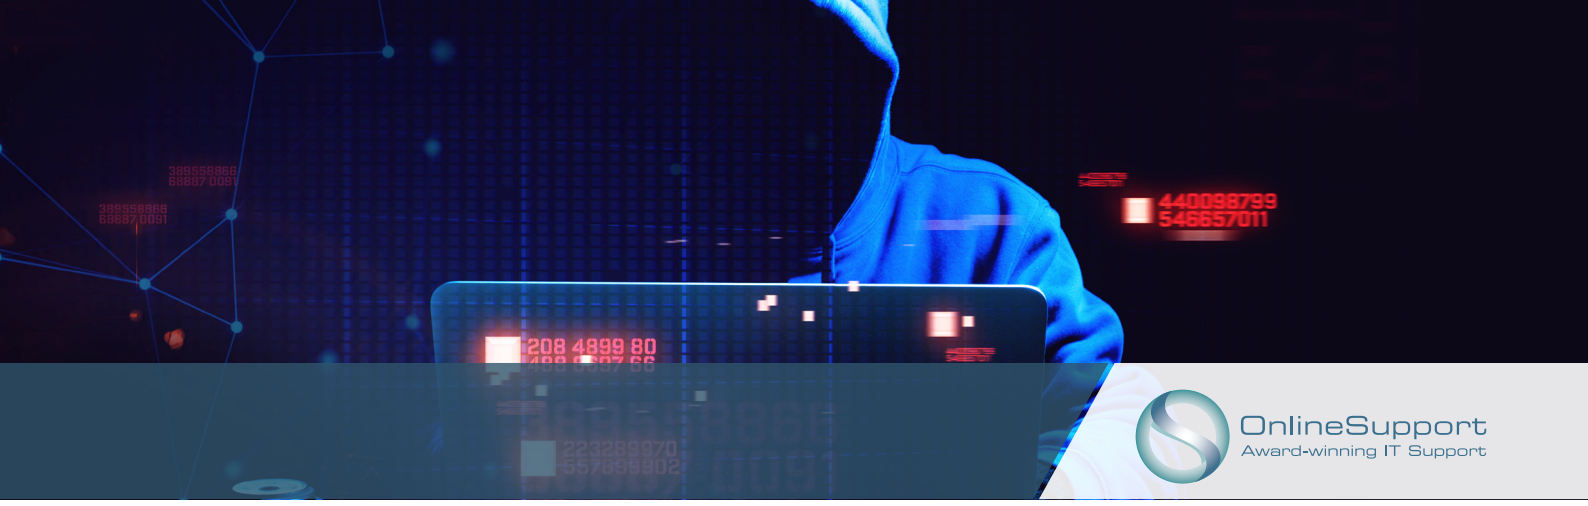

#### Vulnerability Monitoring and Management

Our platform regularly identifies, assesses, reports, manages and remediates vulnerabilities across your systems. A comprehensive vulnerability monitoring tool that provides:

- Complete discovery of all devices on your network
- Vulnerability scanning of your local network
- External port and vulnerability scanning
- Active Directory and Azure AD scans (inactive users, not logged in for 90+ days...)
- Comprehensive quarterly reporting
- Remediation plans to fix critical issues

Our vulnerability management service includes automatic 3rd party software, Windows security and feature updates for your computers.

## Office 365 Security and Monitoring

Our Office 365 Security & Monitoring platform ensures your business is protected from potential attackers by proactively monitoring activity, enforcing global security policies and reporting on security risks in your tenant configuration. Our monitoring system will check:

- Email forwarders
- Admin accounts and role changes
- Logins from unusual locations
- Enterprise apps in Azure
- Mailbox permissions
- SharePoint external sharing
- MFA status on accounts
- Monthly security report
